La Brushlastic PU 400 is a single component, bitumen extended, water based polyurethane coating with exceptional thixotropic properties ideal for the waterproofing of foundation walls and wet rooms. The material unlike most bitumen emulsion based material, is quick drying and can be applied in thick coats. The coating inhibits root growth for soft plants.

Furthermore, the material has the characteristics of a true elastomer and does not resemble the thermoplastic materials of the same genre. The coating reinforced with geotextile fabric or fibre mesh will enhance the durability.

Uses

Waterproofing and protection of:
- Podium slabs & Large roofs,
- Planter Box & Terrace gardens,
- Concrete Roof, Podium slabs
- Foundation walls,
- Wet area including toilets

Features & Benefits
- Water based
- Easy to apply & repair
- Thixotropic
- Seamless.
- Elastic.
- Quick curing

Application Procedure

Surface Preparation
All surfaces which are to receive the coating must be free from oil, laitance, grease, wax, dirt or any other form of foreign matter which might affect adhesion. Typically concrete surfaces can be cleaned using high pressure water jet or grit blasting or by proper wire brushing. Spalled surfaces or those containing large blow holes, cracks and other such defects should be repaired using La Greens Products.

Priming
La Brushlastic PU 400 to be used as primer adding water (1 Part La Brushlastic PU 400 & 1 Part water) It is recommended on the substrate before application of top coat. Required primer to be applied before laying the top coat.

Mixing of primer
Use a low speed paddle mixer for mixing the material in the pail thoroughly by adding equal amount of water i.e Mix 1 part of La Brushlastic PU 400 with 1 Part of water.

Application of primer
Apply the material with rubber squeeze or brush in single coat on the prepared surface.

Top Coat
2 Coats of La Brushlastic PU 400 is recommended to be applied on primer coat. The material being thixotropic 10% water by weight of the top coat can be used while mixing the product i.e., upto 2kg water can be mixed in top coat. Apply first coat of La Brushlastic PU 400 on the primed surface. Allow the first coat to dry before application of second coat. The coating drying time can be 6-8 hrs depending upon the atmospheric temperature at the time of application. The tacky nature of coating can be little hindrance during application of top coat. If the surface is too tacky coarser quartz has to be lightly sprinkled.

Note: The brushes and tools of application have to be continuously soaked in water when not in use else the bristles will be stiffened and cannot be further used.

Coverage

Top Coat - La Brushlastic PU 400
Consumption: 1.8-1.9m²/kg after 10% dilution with water on primed surface.

Primer: 1 coat of primer La Brushlastic PU 400 - Mix 1 part of La Brushlastic PU 400 with 1 Part of water.
Consumption: 5-6m²/kg after dilution

Note: Consumption varies depending upon the condition of substrates.

Package
20kgs Pack

Shelf Life
Can be kept for 9 months minimum in the original unopened pails in dry places and at temperatures of 5-25°C. Cap tins air tightly in order to store unused quantities.

Health & Safety
Wash hands thoroughly before eating or smoking. Upon accidental contact with eyes, flush with water and seek medical attention at once. Wear protective clothing and use soap and water to remove material from skin. Keep away from heat.
